

Project Development Phase Model Performance Test

Date	15 July 2026
Team ID	
Project Name	UCab Premium – Cab Booking Application
Maximum Marks	—

Applicability

Status: Not Applicable to this project.

Justification

UCab Premium does not incorporate a trained AI model. Its automated driver assignment uses deterministic backend logic (nearest available driver) rather than a machine-learned or fine-tuned AI model, so there is no model summary, accuracy, or fine-tuning result to report.

UCab Premium is a MERN-stack (MongoDB, Express.js, React, Node.js) cab booking application. Its technology choices are documented in the Technology Stack and Solution Architecture deliverables for this project.
