

Project Development Phase Model Performance Test

Date	15 July 2026
Team ID	
Project Name	UCab Premium – Cab Booking Application
Maximum Marks	—

Applicability

Status: Not Applicable to this project.

Justification

UCab Premium does not use Salesforce for data management or automation. User, Driver, Booking, Payment, and Review records are managed directly through the application's own MongoDB collections and Express REST API, so there is no Salesforce object/field/report setup to document.

UCab Premium is a MERN-stack (MongoDB, Express.js, React, Node.js) cab booking application. Its technology choices are documented in the Technology Stack and Solution Architecture deliverables for this project.
