

Project Design Phase Customer Journey Map

Date	15 July 2026
Team ID	
Project Name	UCab Premium – Cab Booking Application
Maximum Marks	4 Marks

Scenario: A rider discovers, books, takes, and reviews a cab ride using UCab Premium.

	Entice	Enter	Engage	Exit	Extend
Steps	Rider hears about UCab Premium and opens the web app	Rider registers/logs in and views the ride booking screen	Rider requests a ride, is matched with a driver, and takes the trip	Trip completes; fare is charged and a PDF receipt is generated	Rider rates the driver and views ride history
Rider Actions	Visits UCab Premium website	Registers with email/password, logs in via JWT auth	Enters pickup/drop location, confirms fare estimate, tracks status live	Reviews final fare, downloads PDF receipt	Submits driver rating and review
Goals & Motivations	Help me find a trustworthy cab option	Help me get set up quickly and securely	Help me feel confident my ride is on the way and on time	Help me trust that I was charged fairly	Help me remember and reflect on my trip
Positive Moments	Simple, modern interface builds initial trust	Fast registration and login	Real-time status updates (Assigned → Accepted → On the Way → Completed) reduce anxiety	Instant, itemized PDF receipt	Easy one-tap rating
Negative Moments / Pain Points	Unsure how UCab Premium differs from other apps	Friction if confirmation email is delayed	Uncertainty if no driver is available nearby	Concern if fare differs from the estimate	Ratings may be skipped if not prompted clearly
Areas of Opportunity	Add clear value messaging on the landing page	Speed up email/OTP confirmation flow	Show live driver location on a map during 'On the Way' status	Auto-send receipt via email in addition to in-app PDF	Add an in-app prompt immediately after trip completion to boost review rates
