Customer Problem Statement Table

PS	I am	I'm trying to	But	Because	Which makes me feel
PS-1	a daily urban commuter who relies on cabs for work and personal travel	book a reliable, affordable cab quickly whenever I need one	existing options have unpredictable wait times and unclear pricing	drivers are assigned manually with no real-time visibility into ride status	frustrated and anxious about being late
PS-2	a part-time cab driver looking for steady income	receive consistent ride requests and track my daily earnings	I have no structured system to manage bookings and routes	ride dispatch is handled informally over phone calls with no central platform	disorganized and undervalued

These two problem statements guided the design of UCab Premium's Rider and Driver portals — prioritizing real-time status visibility, transparent fare display, and a structured booking lifecycle for both sides of the platform.
